

SAFEGUARD YOUR HOME AND FAMILY.

Your professional pest manager has recommended ALTRISSET Termiticide – a soil applied treatment as the best option to protect your home.

WHY ALTRISSET?

ALTRISSET is deadly to termites. It works by targeting termite muscles and when termites come into contact with ALTRISSET their jaw muscles become paralysed and they cease feeding within hours and stop damaging your home.

But they don't die straight away – the termites stay alive long enough to transfer ALTRISSET onto other termites and back to the nest resulting in colony control.

ALTRISSET eliminated termites from structures within three months and as it is applied to the soil around your home it provides protection for years.

LOW TOXICITY

Unlike most termite products that are made from chemicals which can be hazardous to the environment, ALTRISSET has a mode of action that is only harmful to termites.

In fact, ALTRISSET is the only liquid termiticide that is exempt from poison scheduling by the Australian regulatory authorities which means your pest manager doesn't have to wear protective gear when mixing and applying the product.

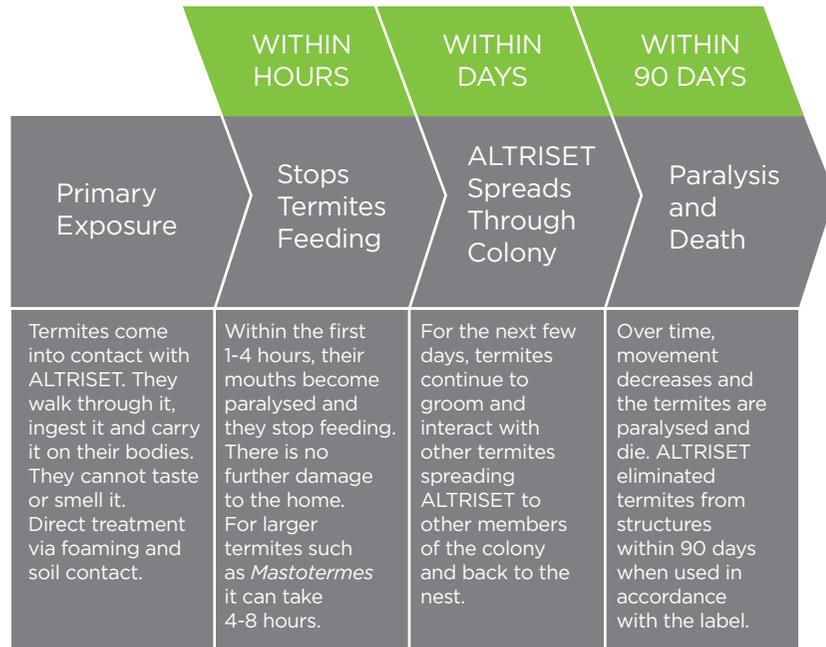

ALTRISSET has very low toxicity to pets, birds, fish, earthworms and even honey bees, which means you can protect your home with minimal impact on the environment.

- ▶ Stops termites feeding within hours
- ▶ Eliminated termites from structures in 3 months
- ▶ Outstanding transfer properties for superior population control
- ▶ Provides continuous protection for years
- ▶ Favourable safety and environmental profile
 - Exempt from poison scheduling
 - Very low toxicity to non-target animals

ALTRISSET termite treatment

Your professional pest manager will conduct a thorough inspection of your property and if live termites are found a direct treatment will be carried out eg. foaming. They will then organise a time to come back to inspect the treated area and carry out a complete perimeter treatment of your property – thus protecting your home from future attacks.

Termite control is not an easy process and requires thorough inspections and treatments by qualified timber pest control professionals using appropriate equipment and innovative products to ensure the control and elimination of termites is achieved.
